REVIEW AND PLANS FOR FURTHER DEVELOPMENT	3
--	---

REVIEW AND PLANS FOR FURTHER DEVELOPMENT

Summary of Feedback on UI

- Improve contrast on various UI elements.
- Shrink the green notification/info box to reduce wasted space.
- Revise hover text color for better readability.
- Add asterisks or indicators for required fields in forms.
- Listing page layout needs reorganization: add image and seller details; adjust message box size.
- Placement of contact information should be more intuitive.
- Fix alignment and structure of the search results page.

Summary of Feedback on Code and Architecture

- Backend image serving needs to be restructured.
- Use custom middleware instead of Express.static for image handling.
- Codebase organization should support cleaner modularization of backend image functions.

Summary of Feedback on GitHub Usage

- Mention any GitHub practices noted, e.g., need for better commit messages or branch organization.

Summary of Feedback on Database

- Add if any issues or feedback related to DB schema, image paths, or required fields were discussed.

Summary of Feedback on Teamwork and Risk Management

- Need for clearer task prioritization.
- Emphasis on timely completion of action items before next Monday to avoid delays.
- No major teamwork conflicts reported, but better coordination on backend/frontend integration was advised.

Architecture Review Status

- Team has reviewed architecture for adherence to MVC pattern.

- Identified need to modularize image serving logic.
- Minor coding style or documentation improvements may be needed.

P1 Feature List for Final Delivery

- Functional listing page with:
 - Display of image
 - Seller details
 - Messaging component
- Custom middleware to serve images dynamically
- Proper indication of required fields in all forms
- Revised UI components for search results and listings
- Branding update to replace trademarked SFSU logo with compliant logo

Other Comments or Issues

- All tasks to be completed and integrated before the next meeting.
- Action items delegated based on feature ownership.
